Abstract. The species of the subgenus *Conocetus* Desbrochers des Loges, 1875 are reviewed and *Polydrusus* (*Conocetus*) *transjordanus* sp. nov. is described. Upon examination of the holotype of *Polydrusus bardus* Gyllenhal, 1834, it was observed that the species hitherto determined *sensu auctorum* as *P. bardus* was a misidentification. The specimen in question was therefore unnamed and is thus newly described as *Polydrusus* (*Conocetus*) *crinipes* sp. nov. *Polydrusus femoratus* (Stierlin, 1888) is a junior synonym of *P. angustus* (Lucas, 1854). *Polydrusus gracilicornis* Kiesenwetter, 1864, *P. cylindrithorax* (Desbrochers des Loges, 1900) and *P. quadraticollis* (Desbrochers des Loges, 1902) are proposed as junior synonyms of *P. bardus*. *Polydrusus zurcheri* (Schilsky, 1912) is proposed as a junior synonym of *P. grandiceps* (Desbrochers des Loges, 1875). *Polydrusus kahri* Kirsch, 1865 is transferred from subgenus *Conocetus* to *Denticonocetus* subgen. nov., with *P. siculus* Desbrochers des Loges, 1872 and *P. vodozi* Desbrochers des Loges, 1903 both recognized as new junior synonyms of *P. kahri*. The lectotypes of *P. gracilicornis*, *P. zurcheri*, *P. marcidus* Kiesenwetter, 1864, *P. gracilis* (Stierlin, 1888), *P. rhodiacus* (Schilsky, 1912) and *P. grandiceps* are designated. A key, figures, label data and distribution maps are provided for all species, except for *P. longus* (Stierlin, 1884), for which no specimens were available for examination, and whose placement in the subgenus *Conocetus* remains uncertain (thus categorized as *incertae sedis*). *Polydrusus angustus* is recorded for the first time for Italy, *P. rhodiacus* for mainland Turkey and *P. festae* (Solari, 1925) for Greece.

Keywords. Polydrusini, *Polydrusus*, *Conocetus*, *Denticonocetus*, new subgenus, new species, new synonyms, new records, taxonomy, Eastern Mediterranean region.

Germann C. 2018. A review of *Conocetus* Desbrochers des Loges, 1875, subgenus of *Polydrusus* Germar, 1817 (Coleoptera, Curculionidae, Entiminae). *European Journal of Taxonomy* 392: 1–39.
<https://doi.org/10.5852/ejt.2018.392>

Introduction

Desbrochers des Loges (1875) established the genus *Conocetus* for three species: *Polydrusus bardus* Gyllenhal, 1834, *P. virens* (Kiesenwetter, 1864) and the type species *Conocetus grandiceps* Desbrochers des Loges, 1875. He later provided a first review of the genus (Desbrochers des Loges 1902), including a determination key, new descriptions and redescriptions of several species.

Schilsky (1910) included *Conocetus* as a subgenus in *Polydrusus* Germar, 1817 based on the similarity of the head and rostrum with the subgenera *Leucodrosus* Seidlitz, 1890 (type species *P. tibialis* Gyllenhal, 1834), *Tylodrusus* Stierlin, 1884 (type species *P. pterygomalis* Boheman, 1840) and *Eustolus* C.G. Thomson, 1859 (at present a senior synonym of *Tylodrusus*). This proposition was followed by all subsequent authors.

The most recently described new species in the subgenus *Conocetus* is *P. (Conocetus) festae* (Solari, 1925), based on specimens from Libya (Solari 1925).

The subgenus *Conocetus* is characterized as follows: 1) rostrum broad, transverse; 2) antennal scrobes lateral, short and triangular with lower margin protruding downwards and obtusely angled; 3) left mandible stronger, rectangularly protruding; 4) temples always well visible; 5) eyes oval to long-oval, more or less bulged, protruding from the head's outline; 6) antennae very slender and thin; 7) pronotum mostly as long as wide; 8) legs slender, femora without teeth; 9) integument of elytra and pronotum with circular to oval adjacent scales and bare areas where hairs arise.

Yunakov (2013) listed 19 species of *Conocetus* in the *Catalogue of Palaearctic Coleoptera* and a further 18 are listed in the *Cooperative Catalogue of the Palaearctic Coleoptera Curculionoidea* (Alonso-Zarazaga *et al.* 2017: 354–364), excluding the erroneous repetition of *Polydrusus (Conocetus) virens* (Kiesenwetter, 1864).

After the present review, *Conocetus* and *Denticonocetus* subgen. nov. consist of 12 species, all distributed in the Eastern Mediterranean region, except for *P. longus* (Stierlin, 1884) from Morocco – reported here as *incertae sedis*.

cPB = collection Piotr Białooki, Sopot
cRB = collection Roman Borovec, Sloupno

Collection localities are cited directly from labels with original spelling and punctuation. For type specimens, the different specimen labels are given from the top downward and separated by a double slash (//). Additional information and general remarks are highlighted using square brackets [].

Photographs were taken with a 5-megapixel digital camera (Leica DFC 420). Series of images were captured through a binocular microscope (Leica MZ16) and processed with Auto-Montage software (Imagic Image Access, Version 8). All measurements were taken digitally with the measurement-tool of the above mentioned Auto-Montage software. Body length was measured from the anterior margin of the eye to the apex of the elytra.

Superfamily Curculionoidea Latreille, 1802

Family Curculionidae Latreille, 1802

Genus *Polydrusus* Germar, 1817

Subgenus *Conocetus* Desbrochers des Loges, 1875

Subgenus *Denticonocetus* subgen. nov.

Below is an overview of the presently valid species belonging to the subgenera *Conocetus* and *Denticonocetus* subgen. nov., as well as their synonyms as proposed here.

Subgenus *Conocetus* Desbrochers des Loges, 1875

Polydrusus (Conocetus) angustus (Lucas, 1854)

Eusomus angustus Lucas, 1854: 38

Eusomus angusticollis Lucas, 1854: 39

Conocetus virens Kiesenwetter, 1864: 252

Conocetus femoratus Stierlin, 1888a: 56 **syn. nov.**

Conocetus rotundicollis Desbrochers des Loges, 1902: 126

Polydrusus (Conocetus) bardus Gyllenhal, 1834

Polydrusus bardus Gyllenhal in Schoenherr *et al.*, 1834: 143

Polydrusus gracilicornis Kiesenwetter, 1864: 253 **syn. nov.**

Conocetus graecus Stierlin, 1884: 81

Conocetus cylindri thorax Desbrochers des Loges, 1900: 14 **syn. nov.**

Conocetus quadraticollis Desbrochers des Loges, 1902: 129 **syn. nov.**

Conocetus quadricollis – Schilsky 1910: 22 (= lapsus)

Conocetus cylindricollis – Schilsky 1910: 23 (= homonym of *Polydrusus (Leucodrusus) cylindricollis* Boheman, 1840; lapsus)

Conocetus cylindrocollis – Yunakov 2013: 368 (= lapsus)

Polydrusus (Conocetus) baudii (Faust, 1889)

Conocetus baudii Faust, 1889: 73

Polydrusus (Conocetus) calabricus (Faust, 1890)

Conocetus calabricus Faust, 1890: 330

Polydrusus (Conocetus) crinipes sp. nov.
[= *P. bardus* *sensu auctorum*]

Polydrusus (Conocetus) festae (F. Solari, 1925)
Conocetus festae F. Solari, 1925: 29

Polydrusus (Conocetus) grandiceps (Desbrochers des Loges, 1875)
Conocetus grandiceps Desbrochers des Loges, 1875: 5
Conocetus zurcheri Schilsky, 1912: 18 **syn. nov.**

Polydrusus (Conocetus) marcidus Kiesenwetter, 1864
Polydrusus marcidus Kiesenwetter, 1864: 253
Conocetus gracilis Stierlin, 1888b: 14
Conocetus bardus Desbrochers des Loges, 1902: 124 (= homonym of *Polydrusus (Conocetus) bardus* Gyllenhal, 1834)
Conocetus dubius Schilsky, 1910: 21

Polydrusus (Conocetus) rhodiacus (Schilsky, 1912)
Conocetus rhodiacus Schilsky, 1912: 17

Polydrusus (Conocetus) stierlini (Schilsky, 1910)
Conocetus stierlini Schilsky, 1910: 24

Polydrusus (Conocetus) transjordanus sp. nov.

Denticonocetus subgen. nov.

Polydrusus (Denticonocetus) kahri Kirsch, 1865
Polydrusus kahri Kirsch, 1865: 122
Polydrusus gentilis Bertolini, 1868: 120
Eustolus florentinus Chevrolat, 1869: 73
Eustolus baldensis Stierlin, 1884: 69
Polydrusus siculus Desbrochers des Loges, 1872, p. 233 **syn. nov.**
Polydrusus vodozi Desbrochers des Loges, 1903: 114 **syn. nov.**

Polydrusus incertae sedis

Polydrusus longus (Stierlin, 1884)
Conocetus longus Stierlin, 1884: 80

Denticonocetus subgen. nov.
[urn:lsid:zoobank.org:act:15B1A726-F663-4A12-9AD8-DA0925B29BC2](https://doi.org/10.15465/zoobank.org:act:15B1A726-F663-4A12-9AD8-DA0925B29BC2)

Type species

Polydrusus kahri Kirsch, 1865

Diagnosis

A new subgenus of *Polydrusus* Germar, 1817, similar to *Conocetus*, especially in the broad rostrum and the shape of the antennal scrobes (see Introduction), but differing in: (1) all femora toothed (untoothed in *Conocetus*) and (2) internal sac consisting of a tissue with rasp-like teeth and a simple, clip-shaped sclerite as shown in Fig. 9A–C. In *Conocetus* the internal sac consists of a complex “wrench”-shaped

sclerite, see Fig. 9D–P, whereas in *Eustolus* the internal sac consists of several differently shaped, complex sclerites, and in the rather heterogeneous *Polydrusus* s. str. the internal sacs consist of prevailing tissues with rasp-like teeth.

Etymology

The subgeneric name *Denticonocetus* subgen. nov. is of male gender and combines the characteristically dentate femora (in Latin: *dentis* = tooth) and the morphologically most similar subgenus *Conocetus*.

Comments on new synonymies

Based on all specimens examined and their identical internal sacs (see Fig. 9A–C), *P. siculus* and *P. vodozi* are hereby regarded as junior synonyms of *P. kahri*.

Magnano (1964) resurrected *P. siculus* from synonymy, mainly based on the differences given by Desbrochers des Loges (1872) in the original description. However, upon examination of specimens from various localities for the present study, these characters do not support a species status, therefore *Polydrusus siculus* = *Polydrusus kahri*.

In the case of *P. vodozi*, the synonymy with *P. kahri* proposed by Hoffmann (1950) and Schott (2014) is formally approved here (*Polydrusus vodozi* = *Polydrusus kahri*). The type specimen in the collection of Desbrochers was examined by L. Schott and confirmed as conspecific with *P. kahri*; furthermore, a male specimen from Corsica was examined (see below).

Remarks

Polydrusus kahri is a widespread species reported from France (Alpes Maritimes), including Corsica (Vizzavona: Hoffmann 1950; Schott 2014), Austria to Dalmatia, Bosnia-Herzegovina, Macedonia, Montenegro (Yunakov 2013; no specimens presently examined and not included in Fig. 10), Greece, and all of Italy including Sicily, but apparently excluding Sardinia (mentioned by Hoffmann 1950, but not included in Colonnelli 2003, nor in Abbazzi & Maggini 2009). Records by Yunakov (2013) from Cyprus are highly dubious and may refer to misidentifications. *Polydrusus kahri* shows large variability in size and density of vestiture.

Polydrusus (Conocetus) crinipes sp. nov.

[urn:lsid:zoobank.org:act:897EA3D6-350A-4C5A-8E6C-02CF14DCF3E8](https://doi.org/10.15465/zoobank.org:act:897EA3D6-350A-4C5A-8E6C-02CF14DCF3E8)

Figs 3A–B, 7E, 9G, 11

Etymology

The name ‘*crinipes*’ derives from the characteristic hairs ‘*crinis*’ on the legs ‘-pes’, shared only with *P. rhodiacus* within the subgenus.

Description

LENGTH. 3.7–4.3 mm, holotype 4.2 mm; females 4.2–5.0 mm.

COLOUR. Body colour reddish-brown. Head, pronotum and elytra set with oval to roundish, vivid green shimmering scales and long, pointed, light brownish adjacent hairs.

HEAD. Rostrum short and wide, almost twice as wide as long. Eyes oval, irregularly bulged, strongest in first third, well protruding from outline of head. Pterygia well developed, visible from above. Pterygial span as wide as frons just behind the eyes. Rostral dorsum and frons between the eyes flat, upper side of head behind eyes slightly bulged. Rostral dorsum irregularly striato-punctuate with carinula in the middle. Epistome well visible, V-shaped, margin glossy. Mandibles strong, left mandible above right one, thus fore margin of epistome assymmetrically protruding leftwards. Antennal scrobes lateral, short and triangular, lower margin buckled downwards, with obtuse angle. Temples visible, $\frac{1}{2}$ the maximal eye length.

ANTENNAE. Long and slender, antennal funiculus longer than scape, reddish-brown, scape bowed, clubbed towards apex, reaching backwards into first third of pronotum. Antennal funiculus with 7 antennomeres: 1st longer than 2nd and 3rd; 5th to 7th of same length; 4th slightly longer than 3rd and 5th to 7th; club with 3 segments, elongate-oval.

PRONOTUM. Transverse (L/W: 0.7–0.8), sides slightly rounded, widest just behind the middle, constricted just before fore margin and simply rounded towards hind margin. Hairs and oval to lanceolate greenish

scales directing towards an imaginary line in the middle of the disc. Scales at disc of pronotum narrower oval.

ELYTRA. L/W: males 2.0, females 1.8–1.9. Elongate, widest at shoulders and almost parallel (males) or widest behind the middle (females), round-pointed towards apex, shoulders present, with hind wings. Striae with shorter, adjacent white hairs. Interspaces with long, light brownish, adjacent, pointed hairs standing irregularly. Vestiture consisting of regular-standing broad oval to roundish scales with vivid green shimmer. Scales narrower along suture.

LEGS. Strong, reddish-brown coloured to yellowish, all femora edentate, set with whitish hairs with a pearl-like lustre. Tarsi with first tarsomere twice as long as second, third bilobed, about 1.5 times as wide as the second, fourth one minute, claw segment as long as second and third together, claws fused at base.

MALE GENITALIA. Penis with apophyses shorter than median lobe, this attenuated towards broad triangular apex with blunt tip, in lateral view flattened (Fig. 7E). Internal sac wrench-like, with leaf-like flattened base, two triangular sclerites at apex and a thin, tube-like, bowed sclerite in-between in lateral view (Fig. 9G).

FEMALE GENITALIA. Spiculum ventrale with very long and slender apodeme, plate hardly sclerotized. Spermatheca C-shaped with short nodulus and ramus; nodulus twice as long as ramus.

Remarks, variability and differentiation

The new species corresponds to specimens misidentified by authors as *Polydrusus bardus*. Examination of the holotype of *P. bardus* revealed that the description by Gyllenhal (in Schoenherr *et al.* 1834) referred instead to a species commonly known as *P. gracilicornis* Kiesenwetter, 1864 (or its junior synonyms, see the overview above for details), and therefore has priority over that name.

The reddish-brown to yellowish legs, with hairs but deprived of scales, are characteristic for both *P. crinipes* sp. nov. and *P. rhodiacus*. *Polydrusus crinipes* sp. nov. further differs from *P. rhodiacus* by the protruding convex eyes (Fig. 3A–B) (vs elongate drop-shaped in *P. rhodiacus*; Fig. 2E–F).

Ecology

The new species was collected from May to July, often along rivers (e.g., Nestos River), from sea level to montane altitudes, on various deciduous trees (e.g., *Corylus avellana*, *Populus*, *Ulmus*, *Ziziphus*).

Polydrusus (Conocetus) transjordanus sp. nov.

urn:lsid:zoobank.org:act:CFF6EFCB-C8C1-489E-BBF0-794D18269536

Figs 2C–D, 6E–H, 9O, 11

Etymology

The name of the new species, *transjordanus*, is derived from its distribution across the Jordan River.

Material examined

Holotype

ISREAL: 1 ♂, Har Meron, 5 Jun. 1974, leg. D. Furth // [red label:] Holotype *Polydrusus (Conocetus) transjordanus* sp. nov. des. C. Germann 2016 (SMNHTAU).

Type locality

ISRAEL: Mount Meron.

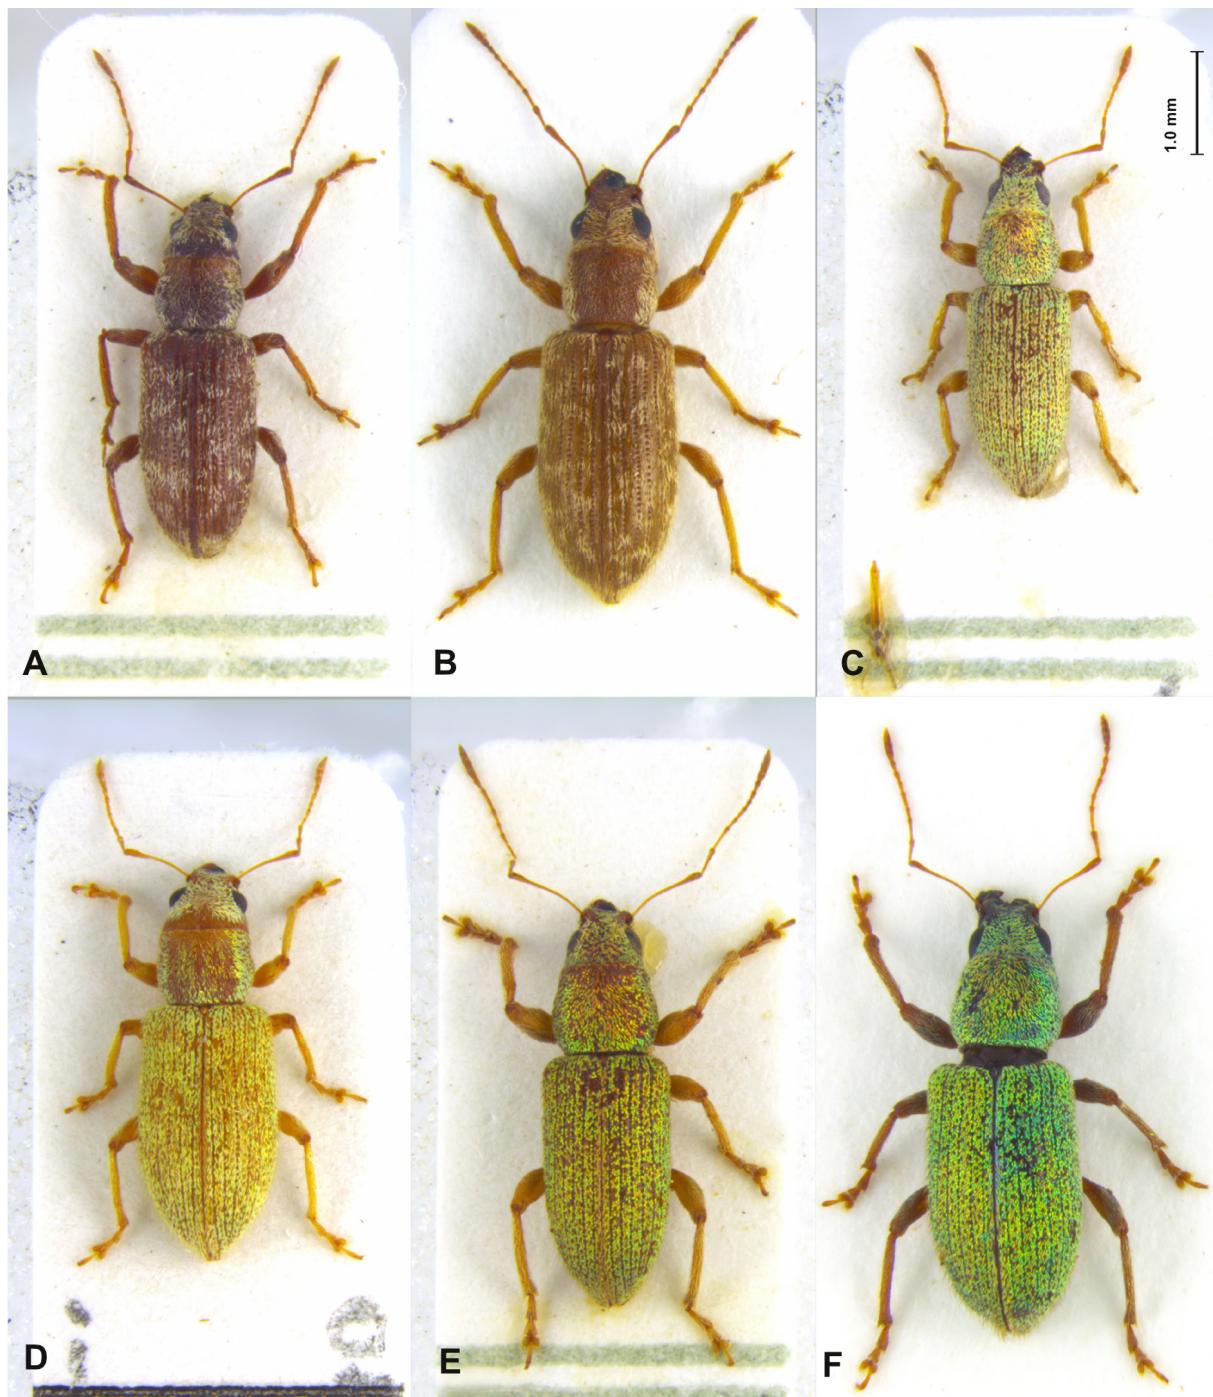

Fig. 2. A–B. Habitus of *Polydrusus (Conocetus) grandiceps* (Desbrochers des Loges, 1875). A. Lectotype male from Lebanon. B. Female from Syria. — C–D. *Polydrusus transjordanus* sp. nov., paratypes from Jordan. C. Male. D. Female. — E–F. *Polydrusus rhodiacus* (Schilsky, 1912). E. Male from Nicosia, Cyprus. F. Female lectotype from Cyprus.

Paratypes

In addition to the collection data cited below, the paratype specimens all carry the following red label: Paratype *Polydrusus (Conocetus) transjordananus* sp. nov. des. C. Germann 2016.

ISRAEL: 6 ex., same data as holotype (SMNHTAU, cCG); 3 ex., Meron, 1 Jun. 1978, leg. D. Furth (SMNHTAU); 1 ♂, Kaifa (= Haifa), leg. Reitter (MFN); 1 ex., Qiryat Tiv'on, 25 Apr. 1954, on *Quercus ithaburensis*, coll. M. Sternlicht, coll. G.A.K. Marshall (BMNH); 1 ♂, Kibuz Dahlia, 15 May 1975, leg. O. Mehl (SDEI); 1 ♂, Ya'ar Bar'am, 33°02' N, 35°25' E, 674 m, oldgrowth woodland, pitfall [traps], 19 Aug. 2005, leg. A. Timm and T. Assmann (SMNHTAU); 1 ♂, Mt Meron, Ziv'on, 22 Nov. 2007, leg. Levanony (SMNHTAU); 1 ♂, Nahal, Oren, riverbed, 11 May 2003, leg. A. Freidberg (SMNHTAU); 2 ex., Hurfeish, recent woodland, 32°60' N, 35°22' E, pitfall [traps], 6 May 2005, leg. A. Timm and T. Assmann (SMNHTAU); 1 ex., Hurfeish, recent woodland, 32°60' N, 35°22' E, 706 m, pitfall [traps], 25 Jun. 2005, leg. A. Timm and T. Assmann (SMNHTAU); 4 ex., Hurfeish, recent woodland, 32°60' N, 35°22' E, 706 m, pitfall [traps], 4 Jul. 2005, leg. A. Timm and T. Assmann (SMNHTAU); 3 ex., Ya'ar Bar'am, 33°02' N, 35°25' E, 674 m, oldgrowth woodland, pitfall [traps], 22 Jul. 2005, leg. A. Timm and T. Assmann (SMNHTAU); 1 ♂, 6 ex., Ya'ar Bar'am, 33°02' N, 35°25' E, 674 m, oldgrowth woodland, pitfall [traps], 7 Jul. 2005, leg. A. Timm and T. Assmann (SMNHTAU); 6 ex., Ziv'on, 33°02' N, 35°25' E, recent woodland, 773 m, pitfall [traps], 4 Jun. 2005, leg. A. Timm & T. Assmann (SMNHTAU); 4 ex., Ya'ar Bar'am, 33°02' N, 35°25' E, 674 m, oldgrowth woodland, pitfall [traps], 4 Aug. 2005, leg. A. Timm and T. Assmann (SMNHTAU); 6 ex., Har Meron, 32°59'44", 35°24'38", pitfall [traps], 31 Jul. 2010, leg. L. Friedman and C. Drees (SMNHTAU); 1 ex., Hurfeish, 32°60' N, 35°22' E, recent woodland, pitfall [traps], 21 Jan. 2006, leg. A. Timm and T. Assmann (SMNHTAU); 1 ex., Ya'ar Bar'am, 33°02' N, 35°25' E, 674 m, oldgrowth woodland, pitfall [traps], 25 Jun. 2005, leg. A. Timm and T. Assmann (SMNHTAU); 2 ex., Mt Meron, Zi'on, 22 Nov. 2007, leg. T. Levanony (SMNHTAU); 1 ex., Nahal Keziv, 33°02'43" N, 35°13'24" E, pitfall [traps], 31 Jul. 2010, leg. L. Friedman and C. Drees (SMNHTAU); 1 ♂, Mi'ilya, on *Quercus*, 23 Jun. 1987, leg. Y. Zvik (SMNHTAU); 2 ex., Har Meron, 32°60' N, 35°25' E, 1140 m, 26 Jun. 2014, leg. A. Freidberg (SMNHTAU); 1 ex., Har Addir, 980 m, on *Quercus boissieri*, *Q. calliprinos*, 20 May 2013, leg. L. Friedman (SMNHTAU); 2 ex., Har Meron, 800 m, Field School, 18 Aug. 2000, leg. L. Friedman (SMNHTAU); 1 ex., Har Meron, Jan. 2010, leg. V. Kravchenko (SMNHTAU); 1 ex., Galilee Nahal Keziv, 20 May 1999, leg. Chikatunov (SMNHTAU); 1 ex., Har Meron, 32°59'44" N, 35°24'38" E, pitfall [traps], 31 Jul. 2010, leg. L. Friedman and C. Drees (SMNHTAU); 1 ex., Ma'alot, on *Quercus calliprinos*, 16 Aug. 1990, leg. J. Halperin (SMNHTAU); 6 ex., Har Meron, 1100 m, 6 Sep. 2007, leg. L. Friedman (SMNHTAU); 1 ex., Har Meron, 2006, leg. H. Tsegai (SMNHTAU); 1 ex., Har Meron, 1100 m, 23 Sep. 1997, leg. L. Friedman (SMNHTAU); 3 ex., Har Meron, 1100 m, 26 May 1999, leg. L. Friedman (SMNHTAU); 1 ex., Har Meron, pitfall, 28 May 2006, leg. N. Angel, (SMNHTAU); 2 ex., Har Meron, 800 m, 28 May 2003, leg. L. Friedman (SMNHTAU); 1 ex., Har Meron, 800 m, 22 May 1998, leg. L. Friedman (SMNHTAU); 1 ex., Har Meron, 19 May 1998, leg. L. Friedman (SMNHTAU); 2 ex., Har Meron, 1100 m, 26 May 1999, leg. L. Friedman (SMNHTAU); 1 ex., Har Meron, 800 m, 26 May 1999, leg. O. Manheim (SMNHTAU); 1 ex., Mt Meron, 5 Oct. 1976, leg. A. Freidberg (SMNHTAU); 1 ex., Mt Meron, 1200 m, 3 Jul. 1980, leg. D. Furth (SMNHTAU); 4 ex., Meron, 1 Jun. 1978, leg. D. Furth (SMNHTAU); 3 ex., N-Keziv, 8 May 1979, leg. D. Furth (SMNHTAU); 1 ex., Nahal Amud, 10 Jun. 1987, leg. F. Kaplan (SMNHTAU); 1 ex., Tur'an Peak, 33°48' N, 35°28' E, 555 m, 18 Apr. 2010, leg. A. Freidberg (SMNHTAU); 2 ex., Mi'ilya, on *Quercus*, 23 Jun. 1987, leg. Y. Zvik (SMNHTAU); 2 ex., Har Addir, 980 m, , on *Q. boissieri*, *Q. calliprinos*, 20 May 2013, leg. L. Friedman (SMNHTAU); 6 ex., Mazzuva, Nahal Bezet, 60 m, 20 May 2013, leg. L. Friedman, on *Q. calliprinos* (SMNHTAU); 1 ex., Hurfeish, 32°60' N, 35°22' E, recent woodland, pitfall, 12 Oct. 2005, leg. A. Timm and T. Assmann (SMNHTAU); 4 ex., Har Meron, 32°60' N, 35°25' E, 1140 m, 26 Jun. 2014, leg. A. Freidberg (SMNHTAU); 1 ex., Meron, 10 Sep. 1973, leg. D. JORDAN: 1 ♂, Jordanie, 5 km NE of Ajlun, 32°36'754 N, 35°77'937 E, 1005 m, 10 Jun. 2011, leg. C. Monnerat (cCG); 2 ♂♂, Jordanien, Fuhesh bei Amman, 14 Oct. 1956, leg. Klapperich (SDEI); 1 ♂, Jordanien-O, Dehbeen b. Jerash, 19 Jun. 1959, leg. J. Klapperich (SDEI); 1 ♀, Ost-Jordanien, Wald bei Jerash, 800 m, 24 May 1956, leg. J. Klapperich (SDEI); 1 ♂, 1 ♀, Jordania, NE, Um Qais, 32°40' N, 35°41' E, 9 m, 14 Apr. 2008, leg. C. Monnerat (cCG, NMBe); 1 ♀, Ost-Jordanien, Schaubak [Shobak], 17 May 1968, leg. Klapperich (SDEI).

Additional material

The following specimens were not included in the type series due to being partly immature or inflexible/hardly remountable.

ISREAL: 2 ex., Yoqne'am, 28 Apr. 1975, on *Quercus ithaburensis*, leg. J. Halperin (SMNHTAU); 11 ex., Yizhar, Salman Farsi Nat. Res., 818 m, on *Q. calliprinos*, 11 Jun. 2013, leg. L. Friedman (SMNHTAU); 1 ex., Panyas, 33°15' N, 35°42' E, 5 Jun. 2002, leg. L. Friedman (SMNHTAU); 2 ex., Har Meron, 1100 m, 26 May 1999, leg. L. Friedman (SMNHTAU); 2 ex., Mazzuva, Nahal Bezet, 60 m, on *Q. calliprinos*, 20 May 2013, leg. L. Friedman (SMNHTAU); 1 ex., Har Meron, 32°0' N, 35°24' E, 900 m, Field School, 26 May 2009, leg. A. Freidberg (SMNHTAU); 1 ex., Bet Qeshet, *Quercus ithaburensis* forest, 7 Apr. 2013, leg. L. Friedman (SMNHTAU); 2 ex., Berekhat Ya'ar, 14 May 2003, leg. L. Friedman (SMNHTAU); 6 ex., Qiryat Tiv'on, on *Quercus ithaburensis*, 1 May 1954, leg. M. Sternlicht (SMNHTAU); 1 ex., Qiryat Tiv'on, on *Quercus ithaburensis*, 13 May 1954, leg. M. Sternlicht (SMNHTAU); 3 ex., Qiryat Tiv'on, on *Quercus ithaburensis*, 19 May 1954, leg. M. Sternlicht (SMNHTAU); 4 ex., Adullam, 15 May 2006, leg. E. Groner and V. Chikatunov (SMNHTAU); 1 ex., Har Meron, 1100 m, 26 May 1999, leg. L. Friedman (SMNHTAU); 1 ex., Har Meron, 800 m, 22 May 1999, leg. L. Friedman (SMNHTAU); 1 ex., Har Meron, pitfall [traps], 31 Jul. 2010, leg. L. Friedman and C. Drees (SMNHTAU); 2 ex. [1 imm.], Har Meron, pitfall [traps], 24 May 2006, leg. N. Angel (SMNHTAU); 12 ex., N. Sansan, 17 May [20]02, leg. Y Mandelik and V. Chikatunov (SMNHTAU); 1 ex. [imm.], Har Hermon, 1970–1990, leg. M. Warburg (SMNHTAU); 2 ex., Galilee, Nahal Keziv, 20 May 1999, leg. Chikatunov (SMNHTAU); 5 ex., Matta', 31 May 1974, leg. D. Furth (SMNHTAU).

Description

LENGTH. Males: 3.2–4.5 mm, holotype: 3.4 mm; females: 3.8–5.4 mm.

BODY. Colour reddish-brown. Vestiture of head, pronotum and elytra set with elongate-oval scales with a greenish pearl-like lustre and long, pointed, whitish hairs, adjacent on head and pronotum, semi-raised (25° angle) on elytra.

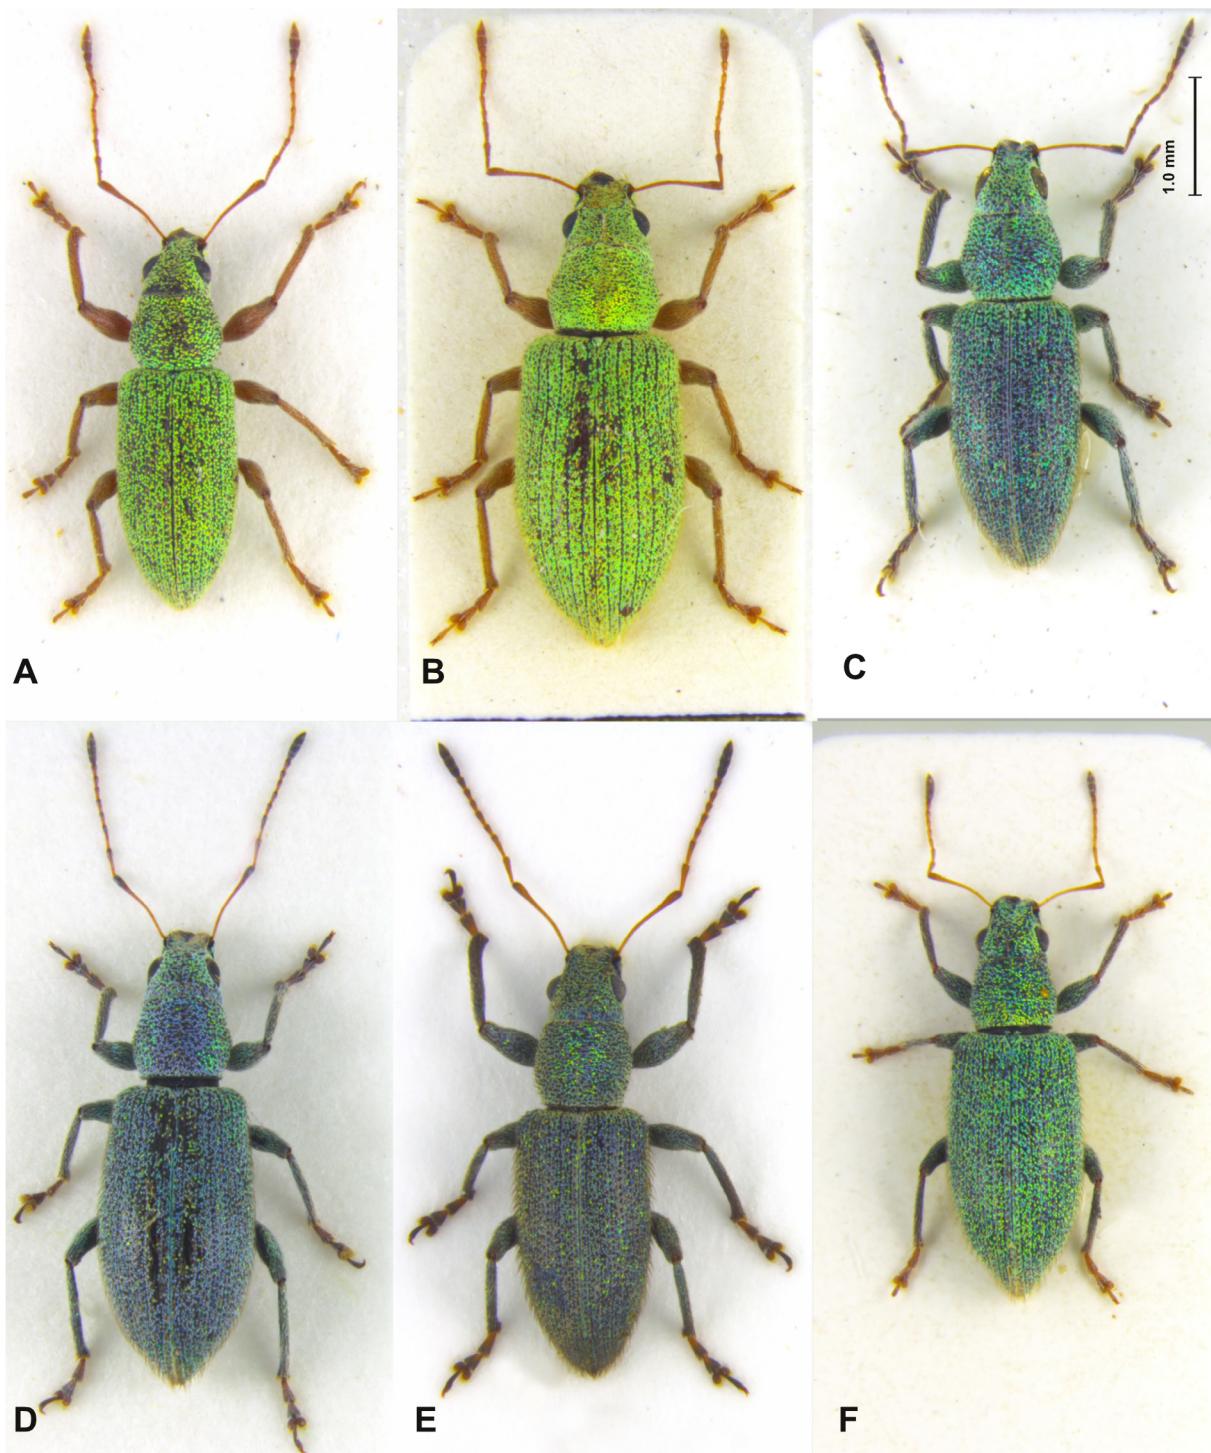

Fig. 3. A–B. Habitus of *Polydrusus (Conocetus) crinipes* sp. nov. A. Holotype, male from Corfu, Greece. B. Female from Bulgaria. — C–D. *Polydrusus angustus* (Lucas, 1854). C. Male from Rhodes, Greece. D. Female from Kalymnos, Greece. — E–F. *Polydrusus calabricus* (Faust, 1890). E. Male from Peloponnese, Greece. F. Female from Cephalonia, Greece.

HEAD. Rostrum short and almost twice as wide as long. Eyes oval, regularly and moderately bulged, protruding from outline of head. Pterygia well developed, visible from above. Pterygial span as wide as frons just behind the eyes. Rostral dorsum and frons between the eyes flat, upper side of head behind eyes slightly bulged. Rostral dorsum irregularly striato-punctuate with carinula in the middle. Epistome well visible, V-shaped, margin glossy. Mandibles strong, left mandible above right one, thus fore margin of epistome asymmetrically protruding to the left. Antennal scrobes lateral, short and triangular, lower margin buckled downwards, obtuse angled. Temples visible, $\frac{2}{3}$ of the maximal eye length.

ANTENNAE. Long and slender, yellowish, scape bowed, clubbed towards apex, just reaching backwards (laterally) to fore margin of pronotum. Antennal funiculus with 7 antennomeres: 1st longer than 2nd; 3rd to 7th of same length but slightly broadening; club with 3 visible segments, elongate-oval.

PRONOTUM. Simply rounded towards hind margin. Hairs and oval to lanceolate greenish scales directing towards imaginary point in middle of fore margin. Scales at margins of pronotum mostly standing more densely.

ELYTRA. L/W: 1.7–1.8. Elongate, widest at shoulders and parallel (males) or widest behind middle (females), round-pointed towards apex, shoulders present, with hind wings. Striae with short, adjacent white hairs as long as puncture diameter. Interspaces with long, whitish, semi-raised and pointed hairs standing regularly in one row. Vestiture appearing spotty and consisting of oval to elongate-oval scales with greenish pearl-like lustre. Scales narrower and smaller along suture.

LEGS. Strong, reddish-brown to yellowish coloured, all femora edentate, set with whitish hairs and oval scales with a greenish pearl-like lustre. Tarsi with first tarsomere twice as long as second, third bilobed, about 1.5 times as wide as second, fourth one minute, claw segment as long as second and third together, claws fused at base.

MALE GENITALIA. Penis with apophyses shorter than median lobe, this attenuated up to $\frac{2}{3}$ of its length, from there broadening towards triangular apex with prolonged blunt tip protruding tongue-like, flattened in lateral view (Fig. 6E–H). Internal sac wrench-like, with leaf-like flattened base, two S-shaped sclerites at apex and a strong, b-shaped sclerite in-between in lateral view (Fig. 9O).

FEMALE GENITALIA. Spiculum ventrale with very long and slender apodeme, plate hardly sclerotized. Spermatheca C-shaped with short nodulus and slightly longer, strongly bowed ramus.

Variability and differentiation

The density of the vestiture varies and the colour of the scales varies from greenish to whitish, but always with a pearl-like lustre. The size also varies considerably: males are generally smaller than females, but the eyes of males are bigger, in relation to head size, than those of females. *Polydrusus (Conocetus) transjordanus* sp. nov. is morphologically most similar to *P. grandiceps*, differing in the smaller eyes (in relation to head size; Fig. 5A–B), mostly more greenish and more oval scales, and the more gracile penis (see key; Fig. 6E–H). *Polydrusus bardus* is at first sight morphologically similar to *P. transjordanus* sp. nov. and may reach the distribution area of the latter at the north-western border (ancient records from “Syria”; see under *bardus*). However, the vestiture of *P. bardus* consists of denser and more regular standing, roundish and more vivid-green scales on the elytra and pronotum (loosely standing, oval and pale greenish ones in *P. transjordanus* sp. nov.), and shorter, more adjacent hairs on the head, pronotum and elytra (about twice as long and more steeply raised in *P. transjordanus* sp. nov.).

Ecology

The new species was found almost year-round (from January to November) and collected mainly in woodland on both evergreen and summer-green oaks (e.g., *Quercus ilex*, *Q. boissieri*, *Q. calliprinos*, *Q. ithaburensis*) and on *Pistacia palaestina*, from lowlands up to montane altitudes.

***Polydrusus (Conocetus) angustus* (Lucas, 1854)**

Figs 3C–D, 7F, 9H, 11

Material examined

Syntypes

Two syntypes of *Polydrusus virens* (Kiesenwetter, 1864):

GREECE: 1 ♀, Athens // Kiesenwetter (ZSM); 1 ♂, *virens* Ksw. Grèce Ksw. // Celadonius (Phyll.) Brull. ♂ *Polydrosus* [sic!] (ZSM). [Both with additional red labels:] Syntype *Polydrusus (Conocetus) virens* (Kiesenwetter, 1864) labelled C. Germann 2016.

Two syntypes of *Polydrusus (Conocetus) femoratus* (Stierlin, 1888):

GREECE: 1 ♂, Griechenland [handwritten by L. Dieckmann] // Syntypus [red label] // coll. Stierlin // *Polydrusus femoratus* Stierl. det. Dieckmann 1989 (SDEI); 1 ♂, Griechenld // *P. femoratus* Stl. [both Stierlin's handwriting] // Syntypus // *Polydrusus femoratus* Stierl. det. Dieckmann 1989 (SDEI).

Type locality

GREECE: Mount Ida, Crete.

Lodos (cCG, cJF); 1 ♀, Menavgat, 5 May 1969, leg. Wewalka (cJF); 1 ♂, Smyrna [Izmir], coll. Apfelbeck (NMB).

Variability and differentiation

Males are more gracile than females. The colour of legs varies from dark brown and blackish to yellowish. The most similar species is *Polydrusus calabricus* which shares the body shape (long-oval elytra) and the shape of the penis (Fig. 7F–G). Both are easily separable by the shape of the eyes (see key and Fig. 3C–F). Only *P. rhodiacus* shows similar eyes (Fig. 2E–F), but differs in legs deprived of scales and the elongate shape of the penis (Fig. 7D).

Ecology

Collected from April to June (exceptionally also in September) at various altitudes from beach to montane level from different deciduous trees (*Amygdalus*, *Pistacia lentiscus*, *Prunus*, *Quercus*) and Cupressaceae.

***Polydrusus (Conocetus) bardus* Gyllenhal, 1834**
Figs 4A–B, 7H, 9K–L, 10

Material examined

Type material

TURKEY: 1 ♀ (holotype of *P. bardus* Gyllenhal, 1834), “Chersonis” [and a second word, probably the collector “Eindstedt...” illegibly handwritten] // NHRS-JLKB 000023178 // Typus [red printed label].

GREECE: 1 ♂ (holotype of *P. graecus* (Stierlin, 1884)), Holotype Attica // coll. Stierlin // Holotypus // *C. graecus* Stl. // Holotypus *P. graecus* Stierlin det. Dieckmann 1989 (SDEI). The synonymy with *P. bardus* is confirmed.

Type locality

The type locality of *P. bardus* is Thracian Chersonese, today Gallipoli in Turkish Thrace.

Comments on new synonymies

Polydrusus bardus = *P. gracilicornis* Kiesenwetter, 1864 syn. nov.

Polydrusus gracilicornis was described based on specimens from Crete (Greece), as Kiesenwetter wrote: “Von Zebe auf Creta gesammelt (Ksw.), von Kraatz mir auch, als in Griechenland gesammelt, mitgetheilt.” [Collected by Zebe on Crete (Ksw.; thus referring to his own collection)...]. Indeed Kraatz only told Kiesenwetter that the (new species) was also found by him in Greece (= mainland Greece, supposedly). There is a single specimen in the Kiesenwetter collection at the ZSM, which is here designated as lectotype of *Polydrusus (Conocetus) gracilicornis* Kiesenwetter, 1864 with the following label data: Creta // *gracilicornis* Candie Ksw // Kiesenwetter // [red label:] Lectotype *Polydrusus (Conocetus) gracilicornis* Kiesenwetter, 1864 des. C. Germann 2016.

Polydrusus bardus = *P. cylindrithorax* Desbrochers des Loges, 1900 syn. nov.

The description of *P. cylindrithorax* was based on specimens from Rhodes. All examined specimens from Rhodes belong to *P. bardus*.

Polydrusus bardus = *P. quadraticollis* Desbrochers des Loges, 1902 syn. nov.

Based on examined specimens of *P. quadraticollis* from Smyrne (= Izmir). All examined specimens from Turkey belong to *P. bardus*.

Remarks

As already stated by Schilsky (1910), *P. (Conocetus) bardus* was often confused and misinterpreted (see under *P. crinipes* sp. nov.), and it was only by examining the type specimen that the true identity of the species could be clearly established. Desbrochers des Loges (1902) confused it with *P. marcidus* in his redescription, but there are also examples in the revised collections where *P. bardus* (or *P. crinipes* sp. nov.) were confused with *P. calabricus* (e.g., det. Stöcklein NMB).

Variability

This often misinterpreted species varies considerably in size, vestiture (scale size, colour), vestiture of legs (metallic hairs with or without scales intermixed), length and orientation of hairs on elytra and, to a lesser degree, in the shape of the pronotum, which is mirrored in the different names aiming for the shape of the pronotum (*cylindrithorax*, *quadraticollis*). However, careful examination of the shape of the penis as well as the internal sac across a comprehensive body of material (see above) allowed the identification of a single, more widely distributed species.

Ecology

Desbrochers des Loges (1902) indicated “sur les Pins” [on pine trees] in his description. On Crete *Polydrusus bardus* was beaten from *Quercus ithaburensis* (C. Germann, pers. obs.) and *Q. pubescens* (Thompson, data taken from labels). Furthermore, according to label data from various collectors, the species was also collected from *Castanea sativa* in Turkey (e.g., N. Lodos), and from *Quercus ilex*, *Q. coccifera* and *Q. ithaburensis macrolepis* in Greece (L. Friedman). Records are from April to August, from sea level to subalpine altitudes.

LYBIA: 1 ♀, Cirene U.C., Apr. [19]38, leg. G. Frey (NMB).

Type locality

LIBYA: Cyrenaica.

Remarks

Solari (1925) provided the following (type) localities (included in Fig. 12): Derna, Zavia (=Az Zawiyah), Mechili, Tecnis (= Taknis) and Tolmetta. The first records of *P. festae* outside of Libya were already reported by Germann *et al.* (2015) as specimens of an unknown *Conocetus* sp. from Samos Island. It is remarkable that this brachypterous and thus supposedly little-mobile species occurs across the Mediterranean Sea. This can be explained by the recent introduction of this species in Greece (Samos Island and Crete), although the first specimens known from Crete (without collecting date, see above) were collected by Gustav Paganetti-Hummel (1871–1949), hence a very recent introduction can be excluded. *Polydrusus festae* is therefore recorded here for the first time from Greece.

Variability and similar species

The species was compared with both *P. baudii* and *P. marcidus* by Solari (1925), based on the key by Schilsky (1910). The squamulate scutellum, the head shape, pronotum and the oval elytra (Fig. 1C–D) as well as its brachyptery are very characteristic and not shared with other species of the subgenus.

Ecology

Collected from February (Solari 1925) to June, from the sea shore to colline altitudes. Found on flowering *Quercus ilex* bushes (G & U. Müller and C. Germann; photograph of the habitat in Germann *et al.* 2015).

Comments on new synonymy

Polydrusus grandiceps = *P. zurcheri* (Schilsky, 1912) syn. nov

The following syntype specimen, fully in accordance with the locality given in the original description (Hadjin-Dagh [= Saimbeyli in Turkey, Adana]), is hereby designated as lectotype of *P. (Conocetus) zurcheri*:

TURKEY: 1 ♂, Hadjin Dagh As. minor // 6 // Ch. Zurcher // Zurcheri * Schils. // Lectotype *Polydrusus (Conocetus) zurcheri* (Schilsky, 1912) des. C. Germann 2016 (MFN).

Variability

Specimens vary from dark brownish with scarce and spotty scales to light brown with denser scales. Freshly emerged specimens (where the mandibular scars are still present; these quickly get lost) show denser standing scales.

Ecology

Collected on or nearby *Quercus ithaburensis* and *Quercus* sp. in general (sifted from leaf litter; M. Borer oral comm.), but also from *Cedrus* sp. (Cupressaceae). Lives sympatrically in similar habitats with *P. transjordanus* sp. nov. Collected from April to July, from sea level up to high montane altitudes.

Polydrusus (Conocetus) marcidus Kiesenwetter, 1864

Figs 4C–D, 8C, 9M, 10

Material examined

Type material

Two syntypes of *Polydrusus marcidus* Kiesenwetter, 1864, where the first one is selected as lectotype:

GREECE: 1 ♀, Taygetos // [red label:] Lectotype *Polydrusus (Conocetus) marcidus* Kiesenwetter, 1864 labelled C. Germann 2016 (ZSM); 1 ♀, [without label, but mounted in exactly the same way as the other specimen, with new label printed on red paper:] Paralectotype *Polydrusus (Conocetus) marcidus* Kiesenwetter, 1864 labelled C. Germann 2016 (ZSM). The locality is handwritten, supposedly by Kiesenwetter himself. The exact locality was not indicated in the original description; Kiesenwetter (1864: 254) wrote very generally as usual at that time: “Aus Griechenland (Krüper)...” [from Greece (Krüper)]. He furthermore mentioned: “...von Kraatz mitgetheilt [reported by Kraatz].” However, the chosen lectotype and paralectotype, which were the only specimens pinned under the species’ name in the collection of Ernst August Hellmuth von Kiesenwetter (in ZSM), fit perfectly the author’s description and it is very likely that the author based his description on them. Kiesenwetter probably bought them from Theobald Krüper, who was known to sell insects from Greece from 1859 (Horn *et al.* 1990), then labelled them himself.

Four syntypes of *Polydrusus gracilis* (Stierlin, 1888) where the lectotype and three paralectotypes are selected in accordance with the description by Stierlin (1888b):

GREECE: 2 ♀♀ [on the same pin, the upper one is selected here as lectotype], *gracilis* Strl Graecia Zeiller [unknown handwriting] // Db. // *gracilis* ♀♂ // ♀ [both are females] (collection L. von Heyden, SDEI); 1 ♀, Db. // *gracilis* // ♀ // Sch. (ditto); 1 ♀, *gracilicornis* Ksw. Creta Rei...[illegible] // 75 // Db. // *gracilis* // ♀ Sch.(ditto). // [red label:] Lectotype/Paralectotypes *Polydrusus (Conocetus) gracilis* (Stierlin, 1888) (= *marcidus* Kiesenwetter, 1864) labelled C. Germann 2016. The lectotype and all syntypes belong to *P. marcidus*; therefore the synonymy of *P. gracilis* with *P. marcidus* can be approved here.

Type locality

GREECE: Peloponnese, Taygetos.

Other material examined

ALBANIA: 1 ♀, Tepelenë Pass N Buz, 900 m, 10 Jul. 2010, leg. H. Mühle 55 (cCG).

Rydh (SDEI); 1 ♂, Antalya, Kemer, 1600 m, 20 May [19]91, leg. W. Suppentschitsch (SDEI); 1 ♀, Zonduldak, Karabük, 20 km E, 22–23 Jun. 1996, leg. V. Svhla (cRB).

Remarks and variability

Polydrusus marcidus seems to reproduce parthenogenetically in the western part of the distribution area. Male specimens are presently only recorded from Turkey (Antalya). Males differ considerably from females (bigger and more stout pronotum, fore tibiae directed inwards towards apex, generally bigger in size; Fig. 4C–D). Some females from the amphigonic populations (Antalya, Kestebek, Myra) are considerably bigger than other populations.

Ecology

Found on two occasions on dry slopes or meadows, once in Bulgaria (F. Burger) and in Greece (H. Winkelmann). From label data the following trees are mentioned: *Quercus coccifera*, *Q. ilex* and *Q. ithaburensis macrolepis* (by L. Friedman from Greece). Collected from April to August, at hill to (high-) montane altitudes.

Polydrusus (Conocetus) rhodiacus (Schilsky, 1912)

Figs 2E–F, 7D, 9F, 12

Material examined

Type material

One syntype specimen, which is selected here as lectotype:

CYPRUS: ♀, Chypre [printed] // Ch. Zürcher [handwritten] // *rhodiacus* m. [mihi] ♂ ♀ [handwritten by Friedrich Julius Schilsky on bluish paper] // [the following label of red paper was added:] Lectotype *Polydrusus (Conocetus) rhodiacus* (Schilsky, 1912) labelled C. Germann 2016 (MFN).

Type locality

CYPRUS.

Other material examined

CYPRUS: 1 ♂, Dionos (Chypre), 28 May 1974, coll. Voříšek (BMNH); 1 ♂, Nicosie (SDEI).

TURKEY: 2 ♂, Adana, As m. [= Asia minor], coll. Lokay (cRB); 1 ♂, Antalya distr., Gündogmus, 27 Sep. 1980, leg. Lodos (NMBE).

Remarks

The type locality given in the original description “Auf Rhodos” [on Rhodes] is wrong and should not be used in faunistic references, as in Dalla Torre *et al.* (1936). Charles Zürcher himself (Zürcher 1919: 159) corrected the origin of the type specimens from “Rhodes” to “L’ île de Chypre”. The present record from Gündogmus is the first for mainland Turkey.

Ecology

Only the given data; collected late May and in September.

Polydrusus (Conocetus) stierlini (Schilsky, 1910)

Figs 1E–F, 5C, 7C, 9E, 12

Material examined

Type material

Two syntype specimens:

GREECE: 1 ♀, *Stierlini* * Schils. // D. Leonh. // SYNTYPUS *Polydrosus* [sic!] *stierlini* Schilsky, 1910 labelled by MNHUB 2014 [printed on red paper] (MFN); 1 ♀, Attica // coll. Stierlin [printed] // *Stierlini* m. [mihi] // Syntypus [printed on red paper] (SDEI).

Type locality

GREECE: Attica.

Other material examined

GREECE: 1 ♀, Erythrae, 12 Jun. [19]86, Porto Jermane, Attiki, leg. N. Neubauer (SDEI); 1 ♀, Rhodos-Ostküste, 1 Apr.–13 Apr. 1991, leg. H.-J. Grunwald (cHW); 1 ♀, Peloponnes, Taigetos, Anavriti, 1100–1700 m, 20/21 Jun. 1997, leg. H. Winkelmann (cHW); 5 ♂♂, 3 ♀♀, Makedonia, Chalkidike, 5 km W of Poligiros, 40°22'11" N, 23°25'27" E, 15 Jul. 2003, leg. Bahr, Bayer and Winkelmann (FO 21) (cCG, cHW, NMBE); 1 ♀, Mariolata Fokida, 8 Jun. 2013, 38°34' N, 22°08' E, leg. Eifler (cHW).

TURKEY: 1 ♀, Tu Gyndogans [= Gündogan], 600 m, leg. S. Lundberg (SDEI); 1 ♀, Tu O. Telar... [illegible], 100 m, leg. S. Lundberg (SDEI); 1 ♀, Sarigin [= Sarigerme?], leg. S. Lundberg (SDEI); 1 ♀, Smyrna, coll. Apfelbeck (NMB); 1 ♀, N. Termessos, 1 Jun. 1989, leg. G. Gillerfors (SDEI); 1 ♀, Türkei, leg. W. Wittmer (NMB); 1 ♀, Myra, 5 May 1991, leg. B. Zbuzek (cRB); 1 ♀, Olüdeniz, 8 May 1991, Fethiye env., leg. B. Zbuzek (cRB); 3 ♀, Prov. Hatay, (Hatay S) Sungur, 800 m, 29 Jul. 1998, leg. H. Winkelmann (cHW); 1 ♀ Antakya, Samandag, Seleukeia Pieria, 40 m, 1 Jun. 2002, leg. S. Zoia and C. Giusto, coll. L. Magnano (BMNH).

Variability

The typical robust head (Fig. 5C) is more pronounced in females than in males, which are generally more slender (Fig. 1E–F). Interestingly, among the few specimens examined, males were much more rarely collected than females.

Ecology

Collected from April to July, from sea level to montane (exceptionally subalpine) altitudes.

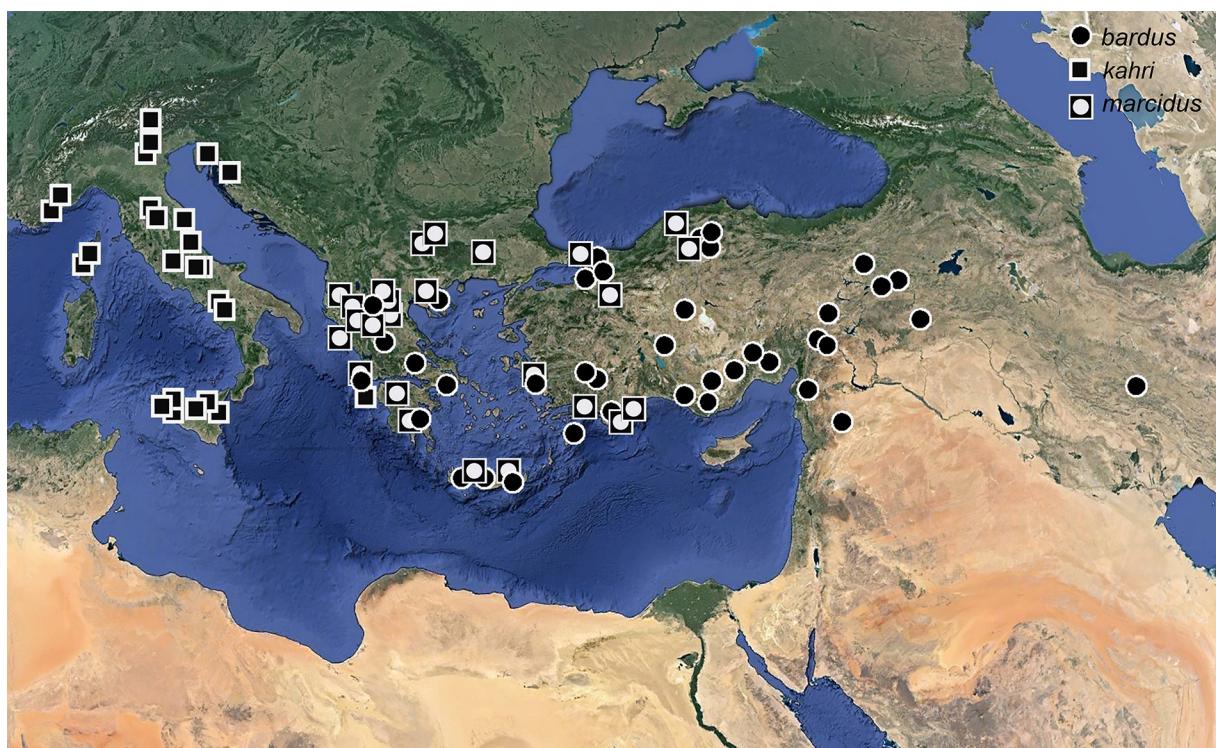

Fig. 10. Map showing records of *Polydrusus (Denticonocetus) kahri* Kirsch, 1865, and two species of *P. (Conocetus)*. Those of *P. kahri* for France were taken from Hoffmann (1950), whereas literature records from Bosnia-Hercegovina, Macedonia and Montenegro, not verified by specimens examined, were not included (map copyright: Google).

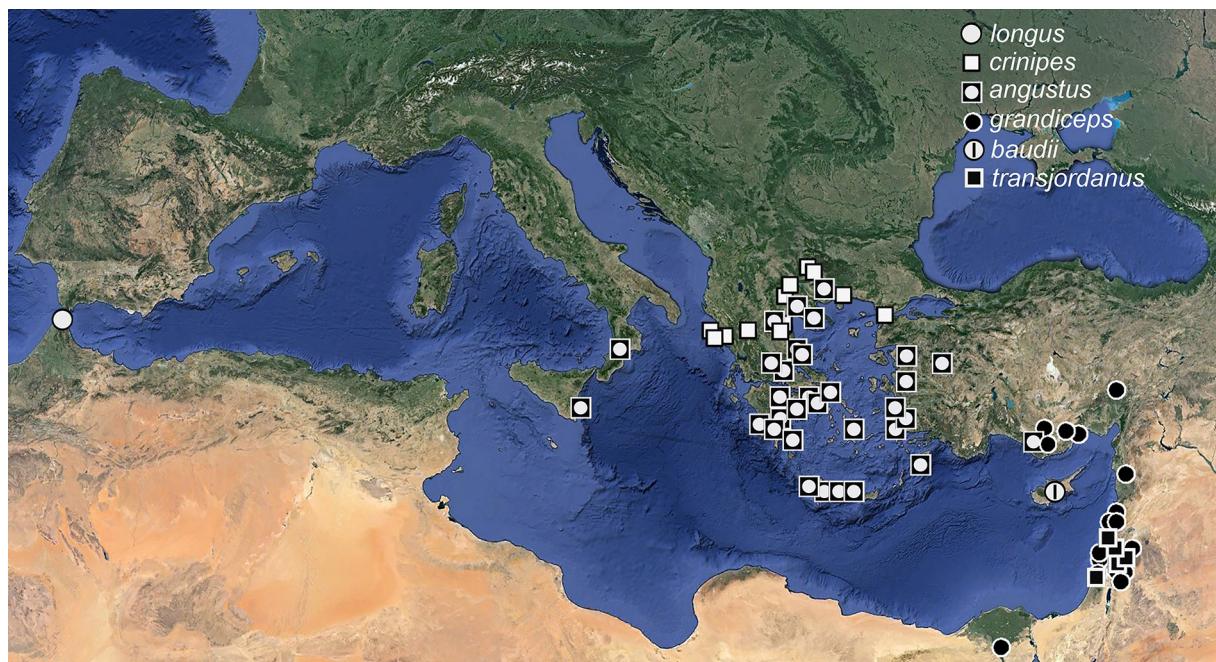

Fig. 11. Map showing records of five species of *Polydrusus (Conocetus)* and of *P. (incertae sedis) longus* (Stierlin, 1884) (map copyright: Google).

Incertae sedis

Polydrusus longus (Stierlin, 1884)

Fig. 11

Type locality

MOROCCO: Tangiers.

Remarks

Unfortunately no specimen of this seemingly very characteristic species, based on its narrow and very elongate elytra (length: 5 mm, width: 1 mm), which are 3 times as long as wide (Stierlin 1884), could be examined in the present review. Stierlin (1884) compared *P. longus* with *P. bardus* (whereas with present knowledge, *P. crinipes* sp. nov. was meant). However, the distribution of *P. longus*, which seems to be restricted to the westernmost part of the Mediterranean basin, in comparison with the eastern focus of all other species of the subgenus, is at least surprising. One specimen from the BMNH was determined by L. Magnano as “*Polydrusus (Conocetus) longus* Stl.”, but belongs instead to *Polydrusus (Chomatocryptus) xanthopus* Gyllenhal, 1834. As the placement in *Conocetus* cannot be verified, and is doubtful based on the deviant distribution and the very elongate habitus, the species is preliminarily treated as *incertae sedis*.

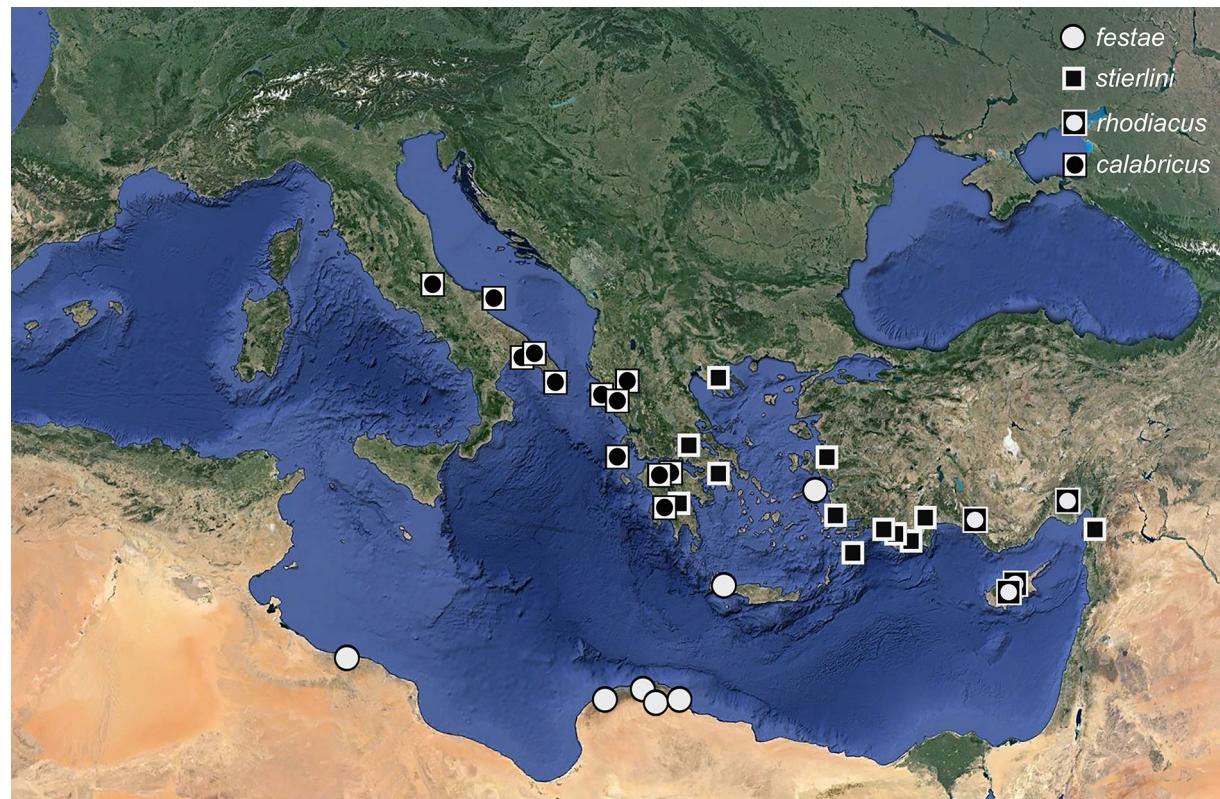

Fig. 12. Map showing records of four species of *Polydrusus (Conocetus)*; additional records of *P. festae* (F. Solari, 1925) are taken from Solari (1925) (map copyright: Google).

Key to the species of Polydrusus (Conocetus) and P. (Denticonocetus) subgen. nov.

1. All femora toothed (Fig. 1A–B) *P. (Denticonocetus) subgen. nov. kahri* Kirsch, 1865
 – Femorae untoothed (*Conocetus*) 2
2. Elytra oval, shoulders not pronounced (brachypterous; Fig. 1C–D); scutellum with densely standing scales; eyes big and convex *P. festae* (F. Solari, 1925)
 – Elytra long oval or parallel sided (males) or parallel at least at basal half, then widened towards apex (females), shoulders pronounced (hind wings present; not verified in *P. longus*); scutellum with inconspicuous vestiture; eyes of various shape 3
3. Elytra 3 times as long as width of both elytra *P. (incertae sedis) longus* (Stierlin, 1884)
 – Elytra less than 3 times as long as width of both elytra 4
4. Legs with either whitish hairs or hairs with green lustre, no scales 5
 – Legs with hairs plus oval or lanceolate scales 6
5. Legs reddish-brown with very long, raised, white hairs with a pearl-like lustre. Eyes less bulged, long oval drop-shaped as in *P. angustus* (Figs 2E–F, 3C–D) *P. rhodiacus* (Schilsky, 1912)
 – Legs bright reddish-brown to yellowish, with shorter hairs with green lustre. Eyes oval, clearly bulged (Fig. 3A–B) *P. crinipes* sp. nov.
6. Head very robust (especially in females); eyes remarkably small, placed laterally, oval and bulging; temples mostly longer than diameter of an eye. Frons and epifrons bulged, therefore head and rostrum appear swollen (Figs 1E–F, 5C) *P. stierlini* (Schilsky, 1910)
 – Head different 7
7. Bigger and long-oval, elongate species with apex of elytra elongately pointed (Fig. 3C–F); scales oval, dense, standing, with blue-greenish sheen; femora robust; body colour dark-brown to blackish; eyes either conspicuously long-oval (Fig. 5D) or circular and bulging 8
 – Smaller species with parallel sided elytra, apex of elytra not elongately pointed; scales brighter golden-greenish or other (coppery, brownish, or whitish to pearl-like); body colour brighter; eyes oval but not long-oval 9
8. Eyes conspicuously long-oval drop shaped and less bulged (Figs 3C–D, 5D) *P. angustus* (Lucas, 1854)
 – Eyes circular and bulged (Fig. 3E–F) *P. calabricus* (Faust, 1890)
9. Hairs on head, pronotum and elytra whitish, conspicuous, long and semi-raised (at least 45° angle). Body colour mostly well visible through rather scarce, often spotty standing, oval to lanceolate whitish scales with a greenish pearl-like lustre; scales on sides of pronotum mostly denser standing 10
 – Hairs less conspicuous, shorter and more adjacent; scales on elytra and pronotum different 11
10. Eyes big (Fig. 5A), protruding (note: males have bigger eyes than females); body mostly dark brown; scales generally narrower, lanceolate-oval, sparsely standing (often spotty), with whitish to pearl-like lustre (only exceptionally slightly greenish); penis more robust, tip longer, truncated (Fig. 6A–D) *P. grandiceps* (Desbrochers des Loges, 1875)
 – Eyes small (Fig. 5B), less protruding (note: males have bigger eyes than females); body colour brighter brown; scales generally more rounded-oval, denser and more regular standing with greenish pearl lustre; penis more gracile, tip shorter, slightly rounded (Fig. 6E–H) *P. transjordanus* sp. nov.

11.	Scales on upper side of body vivid green, circular, dense and regularly standing, hairs in-between short and adjacent (Fig. 4A–B).....	<i>P. bardus</i> Gyllenhal, 1834
–	Scales on elytra generally circular, but with lanceolate ones intermixed, therefore appearing spotty or cloudy (except males of <i>P. baudii</i> , see below), hairs in-between longer. Colour varying from greenish to brownish, more lanceolate scales around disc of pronotum (thus disc appearing bare).....	12
12.	Males.....	13
–	Females (the females of the two following species are very similar, and thus difficult to distinguish)	14
13.	Males more robust, broad, laterally and dorsally bulged. Elytra broader. Vestiture cloudy, with lanceolate scales intermixed (Fig. 4C–D). Penis robust (Fig. 8C), internal sac with long and slender sclerite (Fig 9M); males only known from Turkey, possible parthenogenetic reproduction elsewhere (= geographical parthenogenesis).....	<i>P. marcidus</i> Kiesenwetter, 1864
–	Males more gracile and of about the same size as females; narrower, weakly rounded laterally and hardly bulged dorsally. Elytra long-oval, parallel along middle, pointed towards apex. Vestiture with regular-standing circular scales (Fig. 4E–F). Penis gracile (Fig. 8D), internal sac with short and stout sclerite (Fig. 9N). Known from Cyprus only.....	<i>P. baudii</i> (Faust, 1889)
14.	Elytral hairs brighter, mostly whitish (Fig. 4D)	<i>P. marcidus</i> Kiesenwetter, 1864
–	Elytral hairs mostly (but not always) darker (Fig. 4F). Known from Cyprus only	<i>P. baudii</i> (Faust, 1889)

Discussion

In this review, the often-misinterpreted species of the subgenus *Conocetus* are revised, and the use of synonymous names is clarified through the study of type specimens and topotypical material, resulting in seven new synonymies.

Based on its morphology, *Polydrusus kahri* does not belong in *Conocetus*, nor in any other established subgenus. To accommodate this species, we herein propose the new subgenus *Denticonocetus*.

The re-evaluation of the morphology of *Conocetus* revealed that the following characters are important for specific determination: i) body shape, ii) shape of head, iii) shape of eyes, iv) vestiture of body (including length and orientation of hairs), v) vestiture of legs, vi) shape of scales, vii) male genitalia including internal sac. Using these characters, two new species are described: *Polydrusus (Conocetus) transjordanus* sp. nov. and *Polydrusus (Conocetus) crinipes* sp. nov..

Body size, shape of pronotum, colour of scales, colour of legs, often body colour, and female genital organs are intraspecifically variable, and thus may be misleading. The most surprising faunistic results are new records from Italy with *P. angustus*, Greece with the apterous *P. festae*, extending its distribution across the Mediterranean Sea, and records of *P. rhodiacus* from mainland Turkey, showing that the species is not endemic to Cyprus.
